

SU-PER[®] DMG 3000

Training and Performance Support for Exercising Muscle!

Supports normal cardiovascular, immune, and muscle function.

SU-PER[®] DMG 3000 If you have performance horses, or have been around the racetrack much, you have probably heard of DMG. It is a nutrient that is widely used by some to help give a boost to stamina and energy, as well as lessen recovery times for horses involved in intense training or competition.

But DMG is also known for its ability to improve normal immune response and cardiovascular function, making it a great choice for older horses, those in recovery from illness, or those with poor immune function in general.

DMG has long been used by athletes to assist in endurance and overall athletic performance. DMG has been proven to increase oxygen uptake in the bloodstream, delay fatigue, and to allow for the more efficient utilization of oxygen. One function of DMG that is particularly helpful to performance horses is that DMG has been shown to reduce lactic acid buildup significantly, which lessens the occurrence of “typing up” and general muscle soreness, as well as reduces recovery time after exercise.

For horses that are exercising twice a week or more, DMG is a great tool to protect and maintain muscle tissue.

DMG has also been shown to help normalize fat and carbohydrate metabolism. As most performance horses are fed high energy diets, DMG can help to minimize metabolic issues caused by these added energy sources.

As an immune booster, DMG has been shown to enhance B and T cell function, as well as regulate immune responses to keep inflammation at proper levels. This is of benefit in not only instances of illness or ongoing injury, but in allergic responses as well.

SU-PER[®] DMG 3000 is a DMG supplement available in both liquid or powder, and provides 3,000 mg of DMG per serving. It can be fed to all ages and disciplines, and can be of benefit to any horse in need of performance or immune support.
