PROBIOTIC + PREBIOTIC

ARRIVE™	PRODUCT PURPOSE	AGE	SIGNS AND SYMPTOMS
	Daily digestive support	Young birds	Daily maintenance for health and wellness

A DAILY PROBIOTIC FOR A HEALTHY START

A healthy and balanced digestive system is critical for newly hatched chicks and requires more than just starter feed. Being exposed to a brand-new environment can be stressful. Probiotics help to keep a balanced digestive tract for proper absorption of nutrients that can help with growth. Providing probiotics when chicks are only a few days old will help support their health and help guard them from any potential harm.

FlockLeader™ Arrive™ is uniquely formulated to provide both probiotics and prebiotics for the support and development of newly hatched and young birds.

At Perdue, we have been caring for chickens for more than 100 years. In fact, the backyard flock of our founders, Pearl and Arthur Perdue, started it all! To this day, we remain dedicated to raising strong, healthy, and happy birds through science and innovation.
